Panel Zone Yielding in Steel Moment Connections

Paper by SHERIF EL-TAWIL
(Third Quarter 2000)

On page 121, replace t with t_c in Equations 2, 3 and 4, as follows:

$$V_{max} = 0.4F_y d_c t_c \quad (2)$$

$$V_{max} = 0.52 F_y d_c t_c \quad (3)$$

$$V_{max} = 0.55 F_y d_c t_c \quad (4)$$

Revise the first full sentence following Equation 2 to read:

In Equation 2, F_y is the yield strength, d_c is the column depth, and t_c is the panel zone thickness.
